

Route every case to the firm *most likely to win it.*

An AI agent that learns your network's referral patterns and matches incoming cases to the right firm — with a visible rationale, decline-reason capture, and outcome tracking. Built for personal injury referral economics.

THE PROBLEM

Every firm in your network has a wheelhouse — case types, jurisdictions, value tiers, signals they want and don't want. Today that knowledge lives in spreadsheets, intake notes, and someone's memory.

The cost: cases declined that should have been accepted, cases accepted that go nowhere, and referral fees walking out the door on every mismatch.

THE SOLUTION

A platform that watches every routing decision your network makes — accepts, declines, overrides, outcomes — and gets sharper at recommending the right firm for the next case.

No black box. Every suggestion comes with a rationale and a confidence level. The user always decides; the system always learns.

HOW IT WORKS

01 — INTAKE

Cases captured with structured signals

Type, value tier, jurisdiction, intake strength, and signals like "hospitalized," "corporate defendant," "surgery likely" — plus free-text notes.

02 — MATCH

AI recommends a firm with rationale

Reads the case, every firm's profile, and the network's full referral history. Returns a single recommendation, the reasons behind it, and a confidence rating.

03 — LEARN

Every decision becomes training data

Accepts, declines (with reasons), overrides, and final outcomes feed back into the model. The system gets sharper on your network's actual patterns — not generic priors.

WHAT'S DIFFERENT

- **Decision-capture loop.** Every referral teaches the system. No opaque AI — every suggestion has a "why" your team can argue with.
- **Outcome tracking.** Settlements, referral fees collected, time-to-close. Know which firms actually convert, not just which accept.
- **Built for the referral economy.** Percentage fees, declines, overrides, jurisdictions — all first-class concepts, not bolted on.

FOR AGENCY NETWORKS — PILOT

Direct firms today; agency-tier in active build. Pilot partners co-design the multi-tenant experience and lock in founding-network terms.

- Multi-tenant dashboard with per-firm reporting and network-level analytics
- White-label option (your brand, your domain, your support email)
- Per-firm permissions, intake routing, and referral-fee accounting
- Pilot pricing reflects co-build phase — let's scope to your network size on the call

THE MATH

Industry estimates put PI intake at 90–120 minutes per case, with another 20–40 minutes spent on routing — deciding which firm gets it, calling around, and re-routing after declines. For a network running 50 cases/month, that's **50–100 hours of pure routing labor** before a single case is even worked.

~30 min

AVERAGE TIME STAFF SPEND
ROUTING EACH CASE TODAY —
INTAKE REVIEW, FIRM MATCH,
FOLLOW-UPS

25+ hrs

STAFF HOURS PER MONTH AT 50
CASES — ~\$1,800 IN LOADED
ADMIN LABOR

3 min

ROUTING TIME WITH THE AI
AGENT — REVIEW THE
RATIONALE, ACCEPT OR
OVERRIDE

What that's worth: ~22 hours saved per month. But labor savings are the *floor*, not the ceiling. The real money is in the cases you'd have lost — the high-value PI matter that goes to the wrong firm, gets declined two weeks later, and either dies in the pipeline or settles low somewhere else. **One additional high-tier case captured at \$300K × 33% = \$99K in referral fees** — 4× the platform's annual cost from a single matter.

NEXT STEP

A 30-day pilot. We co-design the agency-tier dashboard against your real intake flow, run live cases through the matcher, and share the uplift math at day 30 — routing time saved, decline rate before vs. after, fees captured. If it works, we scope a network-wide rollout. If it doesn't, you've lost a month, not a year.
